Inna Ivanova

Product Designer, UX/UI Designer

LinkedIn • Mail • Telegram • Portfolio

Product designer with 5 years of experience in EdTech and E-commerce (B2B).
I design iOS, Android, and web products and conduct quantitative and qualitative research.
I lead the end-to-end process from discovery to delivery, focusing on user experience
and business goals, based on research and analytics.

Experience

Product Designer • Samokat • June 2023 – December 2025

Samokat – an express grocery and goods delivery service operating on a dark store (warehouse-store) model and one of the leaders of the Russian e-grocery market.

- Developed and improved the experience of pickers and dark store administrators in mobile applications (iOS, Android) and web.
- Contributed to projects end-to-end: conducted discovery (user interviews, UMUX surveys), built CJMs, USMs, JTBD frameworks, Job Stories, and hypotheses; designed user flows, ran UX testing, prepared handoff to development, conducted design reviews before release, and evaluated post-launch results.
- Collaborated closely with product managers, developers, and analysts; contributed to initiatives in other teams.

- Redesigned a legacy Android application, enabling expansion to both iOS and Android platforms, revisiting outdated solutions, generating new hypotheses, and enriching the product backlog.
- Increased Time-to-Task for order picking by 7% through design improvements in mobile (iOS, Android) and web applications.
- Reduced company costs by 4M RUB annually by conducting research within a cross-team initiative and redesigning the user journey for inter-warehouse inventory transfers in mobile applications (iOS, Android).
- Improved time-to-market by 4% by designing and documenting reusable components in the design system adopted by four product teams.

- Introduced a new «lo-fi sketching» practice into the design process as a recommended pre-design stage, reducing the number of iterations in high-fidelity design.

Product Designer • Moscow Electronic School • Oct 2020 – Apr 2023

Moscow Electronic School is a project for teachers and students aimed at creating a high-tech educational environment in Moscow schools.

- I was responsible for the teacher experience in the mobile app (iOS and Android) and web platforms.
- I increased teacher CSAT to 4/5 based on survey results (compared to the web service, DAU 70K) by designing a mobile app from scratch for grading and homework review.
- I doubled user task speed by redesigning the web service for college operators and administrators, using data from field research and in-depth interviews.
- I designed highly detailed prototypes (100+ screens) in Figma and conducted in-depth JTBD interviews with a focus group of 20+ participants to validate hypotheses.
- I digitized and automated workflows for preschool education staff by designing a mobile app and web service from scratch, based on surveys, interviews, and competitor analysis.

Skills

Product, UX, UI: Product-driven and data-driven approach • Cross-functional Collaboration • Design Thinking • Information Architecture • Visual Design • Design Systems • App (iOS & Android) • Web

Research, testing: UX Research (qualitative & quantitative) • User Research • Usability Testing • AB Testing • Analytical Skills

Technical Tools: Figma • Webflow • AI (Midjourney, Notebooklm, Figma Make, Cursor, Antigravity)

Languages: Russian (native) • English (B1) • Portuguese (A2)

Education

UI Design Advanced Training • Dizayn Tashchit • 2025

Research Training • Samokat • 2023

UX Analytics, Advanced Training • RRS Training Center • 2022

Design Thinking, Seminar Participant • Moscow Government University • 2022

Designer (Specialist Degree) • Moscow State University of Printing Arts • 2010–2016
